

Abhishek Prajapat

Flutter / Mobile Software Engineer

Mumbai, India | +91-9326434841 | prajapatabhishek9326@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | pub.dev/unified_http_client

SUMMARY

Flutter engineer with ~3 years shipping cross-platform apps live on Play Store and App Store across fintech-adjacent, healthtech, edtech and sportstech domains. Owns features end-to-end from architecture through release using Flutter/Dart, BLoC/GetX/Riverpod, Firebase, REST and WebSockets. Experienced with native SDK integrations, production debugging, performance/memory profiling, automated release pipelines and AI-assisted development. Built a real-time calling platform with a supporting Node.js backend for recording and asynchronous media processing, and maintain a published Dart/Flutter HTTP client package on pub.dev.

Architecture: Clean Architecture, MVVM, SOLID, OOP, design patterns

Security & Authentication: Secure Storage (flutter_secure_storage), API request encryption, response decryption, authentication & authorization, role-based access control, JWT/token management, token expiry & refresh

Development Practices: Agile/Scrum, Git/GitHub, code reviews, CI/CD, Postman, Jira, Figma

CORE SKILLS

Mobile Engineering: Flutter, Dart, Android, iOS, BLoC, GetX, Riverpod, MVVM, Clean Architecture, SOLID, OOP, design patterns, responsive/adaptive UI, custom animations, theming, localization, widget lifecycle, app lifecycle

Mobile Platform & Integrations: Firebase (Firestore, FCM, Crashlytics, Auth, Remote Config), REST APIs, WebSockets, Agora, OpenAI/ChatGPT API, Terra API, DigiLocker (Aadhaar), facial recognition, NFC, QR, Google Maps, payment gateways, in-app purchases, Zoom SDK, ASR

Backend Exposure: Node.js/Express, Redis, BullMQ, Cloudflare R2, FFmpeg, webhooks, asynchronous processing, retries, idempotency, concurrency

Testing & Quality: Unit testing, widget testing, integration testing, Mocktail, Flutter DevTools, performance & memory profiling, crash triage

DevOps & Tools: Git/GitHub, GitHub Actions (CI/CD), Shorebird, Postman, Jira, Figma, product analytics (event tracking, funnel analysis)

PROFESSIONAL EXPERIENCE

Associate Software Engineer (Flutter) — Nimap Infotech

August 2024 – Present · Mumbai

- Spearheaded 0→1 MVP development, taking products from concept to production release in a few weeks using AI-assisted engineering (Cursor, Jules), while reviewing, testing and validating the resulting implementation.
- Owned Flutter features end-to-end from architecture through Play Store/App Store release, building responsive phone/tablet UIs with BLoC and GetX.
- Integrated Firebase (Firestore, FCM, Crashlytics, event tracking) and REST APIs for real-time chat, push notifications and secure data sync; used Crashlytics to triage and resolve recurring crash clusters.
- Built OpenAI-powered chat and WebSocket-based real-time communication, with focus on responsive messaging and lifecycle edge cases.
- Delivered native-SDK features including NFC, QR scanning, ASR, Zoom SDK and in-app purchases, handling platform permissions and app-lifecycle behavior.
- Investigated memory pressure using Flutter DevTools and improved resource retention through asset optimization and disciplined stream/state disposal.
- Owned Android/iOS build and release management, including GitHub Actions CI and Shorebird hotfix releases.
- Mentored 2–3 junior developers and conducted code reviews to improve delivery consistency.

Flutter Developer — Furation Tech Solution

August 2023 – July 2024 · Mumbai

- Built cross-platform Flutter applications using Clean Architecture and BLoC, keeping feature code maintainable across Android and iOS.
- Developed a Dream11-style fantasy cricket application with live tournaments and prediction-based gameplay, using WebSockets for low-latency score and stats updates.
- Implemented a restaurant-booking feature with real-time slot synchronization, maintaining accurate availability under concurrent updates through BLoC-driven state.
- Integrated FCM push notifications and in-app chat, and built animated interfaces for real-time user feedback.

SELECTED PROJECTS

Secured Calling Platform — real-time voice/video calling app + supporting backend · Flutter, Node.js, Agora, Redis, BullMQ, Cloudflare R2, FFmpeg

- Designed a two-service processing flow: a thin always-on webhook receiver plus a heavier recording worker using BullMQ/Redis; implemented idempotent webhook ingestion and targeted a 5–10 minute recording-availability SLA.
- Resolved Android GC pressure from 200+ simultaneous native audio players by introducing a shared GetX playback-controller singleton with lazy SliverList.builder rendering.
- Diagnosed HLS audio playback on Android and fixed ExoPlayer source selection by explicitly handling HLS media sources when the URL lacked a file extension.
- Fixed incoming-call delivery in background/terminated Android states using flutter_callkit_incoming, FCM data-only messages and background handlers.
- Optimized recording retrieval with bounded concurrency (pool size 4), exponential-backoff retries and batch endpoint usage.

Mask Messenger — anonymous mask-based chat + virtual-goods store · Flutter, In-App Purchases

- Built the monetized virtual-goods (“digital mask”) store end-to-end — catalog UI, in-app purchases, and the purchase-to-entitlement flow that unlocks masks on a user’s profile.
- Owned the store’s purchase lifecycle — buying, restoring and applying digital masks across the real-time chat experience, as part of a 5-person team.

MyAO / AO Companion — orthopaedic training · Flutter, OpenAI, PowerPoint SDK · App Store

- Built an AI-assisted lecture builder that generates editable presentations from predefined layouts and enhanced the AI Tutor with sentence-level annotation and contextual queries.
- Streamlined asset management and folder structure to reduce app footprint.

Digi Pravesh — visitor management & access control · Flutter, DigiLocker, Facial Recognition · Play Store | App Store

- Integrated Aadhaar-based identity verification through DigiLocker and implemented facial-recognition checks with alignment and accessory restrictions.
- Optimized on-device memory handling to improve stability.

Vizhy — health-tracking platform · Flutter, ChatGPT API, Firebase · Play Store | App Store

- Built a ChatGPT-powered conversational health bot with ASR for hands-free logging; integrated Firestore, Crashlytics and Terra API for health-data collection.

Highlands Brain — learning platform for adult learners · Flutter, NFC, QR, REST · Play Store | App Store

- Built QR/NFC check-in and check-out functionality and contributed API/feature work within a 12-member cross-functional team.
- Handled merge-conflict resolution and PR management in a high-volume Git workflow.

FantomPlay — live cricket prediction & trivia · Flutter, WebSockets, REST

- Streamed real-time cricket scores over WebSockets alongside historical match data; implemented authentication and dynamic-link handling.
- Designed adaptive Android/iOS UI and custom animations.

OPEN SOURCE

unified_http_client (pub.dev) — Author and maintainer of a published Dart/Flutter package providing a unified HTTP client abstraction for REST integrations. pub.dev/packages/unified_http_client

EDUCATION

MCA, Software Engineering — Amity University

2024 – 2026 (Expected)

B.Sc. Information Technology — Mumbai University

2023
